

1. Download template from xxxx and make your own design. Note that bottom part of your design will covered by the magazine end cap and the top part will not be visible when the magazine is mounted in the gun. Note that all colors will be tone down a bit due to the dark magazine outershell

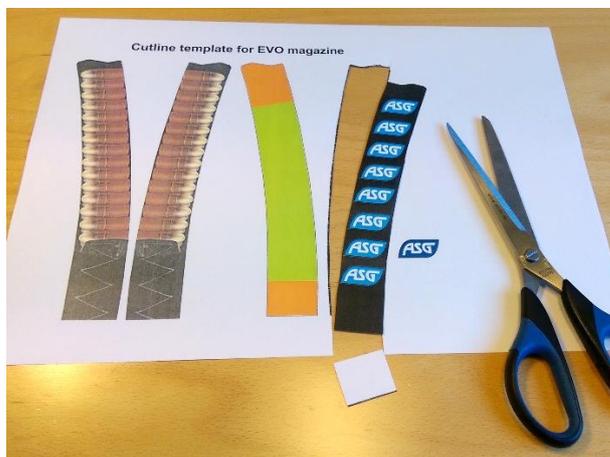

2. Open the magazine bottom by sliding the bottom cap off and use a 'pin driver' to remove the magazine pin.

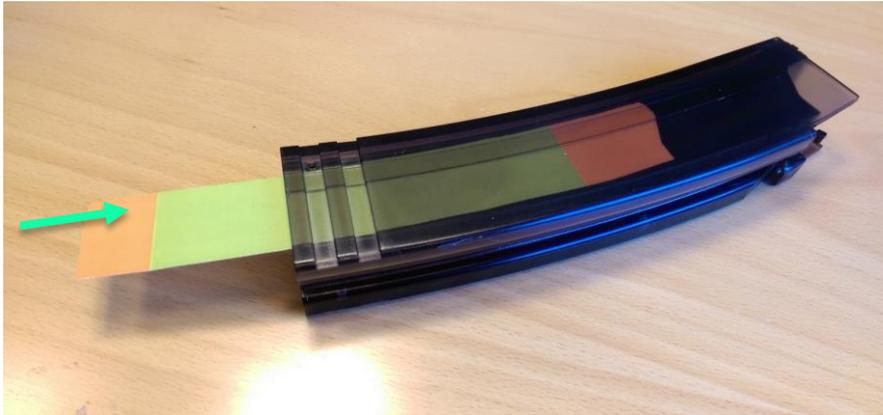

NOTE the magazine inner part is no longer locked and can be pushed out which is not necessary to do in order for you to mount your design – If you do anyway – beware of the springs!

3. Cut out your design. Make sure to cut inside of 'cutline' to prevent getting white lines at the edges. Here our example is marked yellow for areas not seen when magazine is mounted in gun.

4. Slide your design into the magazine as shown. Replace pin and bottom cap to finish the job.

5. Enjoy your magazine now showing what you love the most.
